WITTY THE ROBOT

UNDERSTAND - LEARN - HAVE FUN

Our great adventure starts today with the T Rex. *Witty* will guide your child and ask him questions to which he answers audibly, each time through a game or with a playful gesture.
Witty will celebrate if your child has the right answer, impatience will show if he takes a little too long or will be happily dissatisfied if the answer is not quite right.
- Why does the T Rex have such small arms?
- How did he stand up?
- Which other dinosaurs did he meet?
- Was he on Earth when a giant asteroid hit our planet?

The children's curiosity and their sense of observation are therefore awakened and rewarded, they will be proud to show you their discoveries and invite you to *Witty*'s pedagogical universe by imitating the T Rex's roar.

Time for exploration!

Time for exploration! The adventure is only beginning. *Witty the Robot* will soon accompany your children through other fascinating universes.

The new dynamic and sensory pedagogical approach

Witty the Robot is an app designed for children aged 5 to 9 years old that allows them to learn better, awaken their curiosity and free their imagination.

How? Thanks to ***Witty***, a robot equipped with a natural language processing system based on the latest advancements in speech recognition technologies and artificial intelligence. It encourages the child's senses through speech, touch and engaging visuals.

The child has fun making discoveries thanks to our innovating pedagogical approach that invites him to be the central character in his journey of learning.

Witty helps your child to uncover facts on a given topic and he becomes unbeatable on the subject!
